

*I have a TikTok account. I would like to post a picture To my account. I would like to be able to have this picture clickable so that when someone clicks on it it will take them to a specific URL. If this is possible please let me know how to do it. If it is not possible is there another way that this can be done.*

Unfortunately, it is not currently possible to add clickable links to images on TikTok. TikTok only allows clickable links in a user's profile bio or within a video's caption or comments section.

However, you can include a call-to-action in your video's caption, asking viewers to click the link in your bio for more information. To add a link to your bio, go to your profile, select Edit Profile, and then add the URL in the Website field.

Alternatively, you could create a video that includes a visual call-to-action, such as displaying a URL or QR code on the screen, and instructing viewers to visit the website in the video's caption or comments section.
